HYDRODYNAMIC
POWERS

Feeling too hot is one of the major causes of bad sleep. The body starts perspiring to release heat. To assist the body in cooling down, the mattress and pillow need to wick away perspiration.

Thanks to its distinct hydrophilic function, FERAN ICE® produces the fastest moisture transport in textiles.

STAY DRY & COOL AT NIGHT

The innovative FERAN ICE® finishing adds a soft hydrophilic moisture absorbing layer to your mattress fabric. FERAN ICE® increases the evaporative performance and cools down your body, properties that last as long as your mattress does.

AND A FEW EXTRA FEATURES:

- FERAN ICE® is washable at 40°C.
- FERAN ICE® improves the soil release properties of the textile, making it easy to clean.
- The rapid moisture evaporation helps the fabric to dry quicker, which is great for hygienic reasons.
- FERAN ICE® has magnificent antistatic properties.
- FERAN ICE® gives the fabric a soft and supple feel.

THE BEST BUY SOLUTION

Synthetic fabrics are not only versatile and durable, they are also the best buy on the market. FERAN ICE® allows you to add moisture management qualities to your mattress without making it substantially more expensive. You get more value for your money.

LASTING MOISTURE MANAGEMENT

Tests at the Rudolf Laboratories in Germany have proven the effectiveness of FERAN ICE® as compared to untreated 100% PES mattress fabrics. FERAN ICE® treated PES fabrics are clearly superior in moisture management, even after five washes at 40°C.
