DESLEEMATTEX

ppprmnt®

Certain bacteria can have a very negative effect on you and your sleep. Peppermint, a hybrid mint characterized by its bright green leaves, is widely known across the globe and offers a solution to this problem.

PPPRMNT® AS A NATURAL DEFENSE SYSTEM

Peppermint is one of the oldest herbs used for both culinary and medicinal products and still one of the most popular herbs to date.

PPPRMNT® is based on one specific ingredient of the peppermint plant, namely peppermint oil, which is extracted from the leaves via steam distillation.

This oil is known for its anti-bacterial properties. It consists of a high concentration of natural pesticides and is known to fend off pest insects as well as bacteria and dust mites. It delivers a natural based antimicrobial protection, an integrated hygiene function and odor-management to give you the best night's rest possible.

Besides having the benefits of long-lasting freshness and antimicrobial properties, PPPRMNT® is also a fast renewable resource and is considered a sustainable alternative for silver as it is plant-based.

The peppermint essential oil is also a food grade ingredient, used in for example chewing gum, toothpaste and mouthwash.

ENVIRONMENTALLY FRIENDLY

PPPRMNT® is a natural antimicrobial finish that offers protection against bacteria and dust mites. By inhibiting the growth of bacteria and dust mites in a natural way, PPPRMNT® delivers a safe and environmentally friendly solution to keep your mattress fresh and clean.

PPPRMNT®
FENDS OFF BACTERIA
as well as dust mites
