OVERNIGHT SKIN CARE

DESLEEMATTEX

HOW DOES IT WORK?

The mattress fabrics are treated with specific probiotics, encapsulated in microscopically small bulbs. These capsules firmly adhere to the textile fibres and withstand up to 20 washings, thus covering the entire lifespan of the mattress.

EFFORTLESS

Through friction between our body and the mattress, the capsules are crushed and the probiotics become active. The Skin+ probiotics produce carotenoids, organic pigments that are also found in the skin of fruit and vegetables. These carotenoids effortlessly reach your skin through sheets and nightdresses.

Once the technology is activated, the production of carotenoids keeps going. The carotenoids are 10 times more active and more stable than the ones produced by tomatoes or carrots.

BEAUTIFY & PROTECT YOUR SKIN

Carotenoids are antioxidants, known to protect our skin from ultraviolet light and prevent skin damage caused by ageing. They stimulate rejuvenation of the individual skin cells, thereby improving the moisture level, softness and smoothness of the skin.

OVERNIGHT SKIN CARE

SKIN+ is a game changing technology in skin care, a novel treatment for mattress fabrics based on a patented probiotic technology. No need to spend time in front of the bathroom mirror, applying multiple lotions and creams. Just go to sleep and your mattress does the job, night after night.

SKIN+ PROTECTS, REGENERATES & BEAUTIFIES THE SKIN OVERNIGHT
